2. The following is an examiner's statement of reasons for allowance: the prior art of record fails to disclose an integrated circuit for energizing a fluorescent lamp by comprising an adaptive zero-voltage-switching and minimum-current-switching (ZVMCS) sensing output voltage of a half-bridge circuit and control a drive signal to maintain the said output voltage/current (or operating frequency) near or at zero at a switching time as required in claims 3, 4, 20 and 21 or the ZVMCS circuitry controls a drive circuitry to maintain the operating frequency at or near the resonant frequency as required in claims 5 and 22. The prior art also fails to establish modes such as locking out under voltage, frequency sweep mode, an adaptive mode and fault mode for regulating and preventing undesired power supply to the lamp as required in claim 14, wherein the integrated circuit is built in eight pins structure established in a manner as required in claim 15.
3. The remaining dependent claims are allowable for at least above reason.
